

AI Opportunity Assessment for a local service business.

This example shows how Natyv AI turns a messy list of possible AI and automation ideas into a plain-English build order. The goal is to remove overwhelm, recover revenue fast, and avoid buying tools before the business knows what should be fixed first.

BUSINESS

Gulf Coast Home Services

TYPE

Local service team

INTERVIEW

20 minute AI intake

OUTPUT

48 hour action map

WHAT WE HEARD

The owner is losing leads after hours, following up manually, and tracking too much in scattered inboxes.

● Front Desk ● Sales ● Operations ● Marketing ● Customer Experience

FIRST MODELED UPSIDE

\$3,000/mo

If two jobs per month are recovered from missed calls or slow replies, the first two automations can pay for the assessment and create a clear build path.

OPPORTUNITY MAP

Ranked by payoff and setup time.

Every idea is placed by business payoff and setup time. The best first move sits high and left: strong payoff, fast implementation.

Highest payoff first

More revenue earned, or profit...

Least setup time

Fastest path to a working win.

Wait until the base is ready

Still valuable, just not first.

SETUP TIME

The first five moves.

This is the part designed to calm the owner down. Not everything has to happen at once. The first few wins create the foundation.

1

Missed-call rescue agent

FRONT DESK

Answer after-hours calls, qualify intent, and route urgent leads before they shop around.

WHY FIRST

The business already gets enough calls. The fastest upside is catching the ones nobody answers.

PAYOFF

\$3,000/mo potential recovered revenue

SETUP TIME

Same-day setup

2

Instant text-back follow-up

SALES

Reply to new inquiries in seconds, capture the reason for contact, and keep the lead warm.

WHY SECOND

Speed-to-lead compounds everything else and works before a CRM rebuild is finished.

PAYOFF

Hours saved every week

SETUP TIME

1 short workflow

3

Simple CRM pipeline OPERATIONS

Move leads from inboxes and sticky notes into visible stages with owner, next step, and value.

WHY THIRD

It is a bigger lift, but it prevents every future automation from becoming another disconnected tool.

PAYOFF

\$3k-\$5k implementation value

SETUP TIME

3-5 day build

4

Review request automation MARKETING

Trigger review asks after completed work and route unhappy customers to a private save path.

WHY FOURTH

Easy win, but it matters more after the lead-capture leaks are handled.

PAYOFF

More reviews without more admin

SETUP TIME

1 short workflow

Past customer reactivation

CUSTOMER EXPERIENCE

Reach past customers with timely follow-up instead of waiting for them to remember you.

WHY FIFTH

Great upside, but only after the new-lead response path stops leaking.

PAYOFF

Revenue from customers already earned

SETUP TIME

1-2 day cleanup

4-DAY QUICK WIN PLAN

What the first implementation can look like.

The assessment is not a theory document. It turns into a focused rollout that can start with one high-payoff workflow.

Day 1

Confirm call types, urgency rules, business hours, routing, and intake fields.

Day 2

Build the missed-call and text-back flow, then test it against real customer scenarios.

Day 3

Connect notifications, lead capture, and handoff steps so the owner sees every new opportunity.

Day 4

Launch, monitor conversations, adjust the script, and decide whether to build the next priority.

Sample report only. The real assessment uses the business owner's answers, current tools, call volume, lead sources, follow-up process, and operational constraints to rank the roadmap.
